

Success story:

October 12th, 2018, Archana Saxena,RO, SIHFW visited Labour Room of Amba Mata, satellite, Udaipur, for monitoring.

It was shocking to note how mechanically patient care is given! A patient came seeking removal of PPIUCD due to repeated intermittent bleeding, resident there removed it and let her go without any advice or counseling for future alternate birth control. Nursing staff present there also did not take any notice. When SIHFW RO talked to her before she could go out of LR asking what are you going to do now for birth control?" . The woman was perplexed, she said "Copper-T did not suit me". On enquiring about availability of ANTARA, she was counseled by SIHFW RO and the woman said she will go and get it.

While going out of the hospital luckily, Archana found that woman and asked her, did you go to Room No 7 for ANTARA?" and was so satisfied to note that not only she visited but got the injection too and will continue to get more as per schedule and was very thankful to her. It's a success in controlling ...don't know how many births!
